HISTORIES OF WHITE ECOLOGIES, GRATITUDES FOR BLACK ECOLOGIES

Jamie Allen and Daniel Barber

February 2022

This is an ecology of ideas. And it is through an ecology of concepts that their insights, assertions, improvisations, and critics — Black, Indigenous, and white — can be put into relation. Thinking through a terraformed, human-made, capitalocene- and warming environments, ecology is a idea that creates the very environments it claims to describe. It is a science of self, diagnosing the maladjustments of our world systems, of who or what objects the codes, power and so-called evils. Awareness, the idea of "eco" as a house, a habitat, a home, is the ground of ecological discourse, and claims to the possibility of thinking, and acting, differently today. The consideration of influence and authority in ecology, as in any science, is complicated by the ways that scientific laws, taxonomic schemes, and environmental theory can also be linked to the agendas of productivity and political power that they serve.

Taylor & Allen, see: Zitierte Quellen (in der Arbeit)

Here we begin to think about the ways that Black ecologies, Black ecologies, and the constructions, frames, ecologic insights, and concepts of Black ecologies, and the ecologies of Black ecologies, and the ecologies of Black ecologies, and the ecologies
