What is not BIM?

Source: aardeplan

At the front ok - ...

Source: Bundesarchiv (D)

... – and behind, there's nothing

BIM is more than 3D-Modelling

- The “G” alone, the 3D-geometry isn’t the core of BIM.
- The “I”, the information is missing.

BIM is not a software

... or a tool.

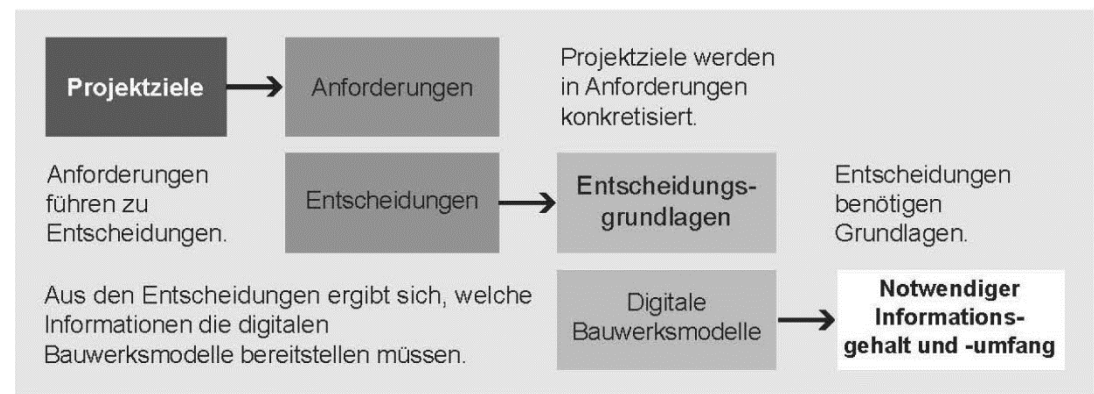

Source: ban993HAO

BIM is...

... a method:

“Virtual design, construction and operating, which combines the use of digital building models and appropriate organisational forms and processes.”

Source: SIA 2051 BIM

A method...

... which supports interdisciplinary collaboration between stakeholders by using digital building models.

Source: aardeplan

1. People

BIM is more than the digital collaboration between clients and planners

Client – Designer/Planner

Source: M. Huber

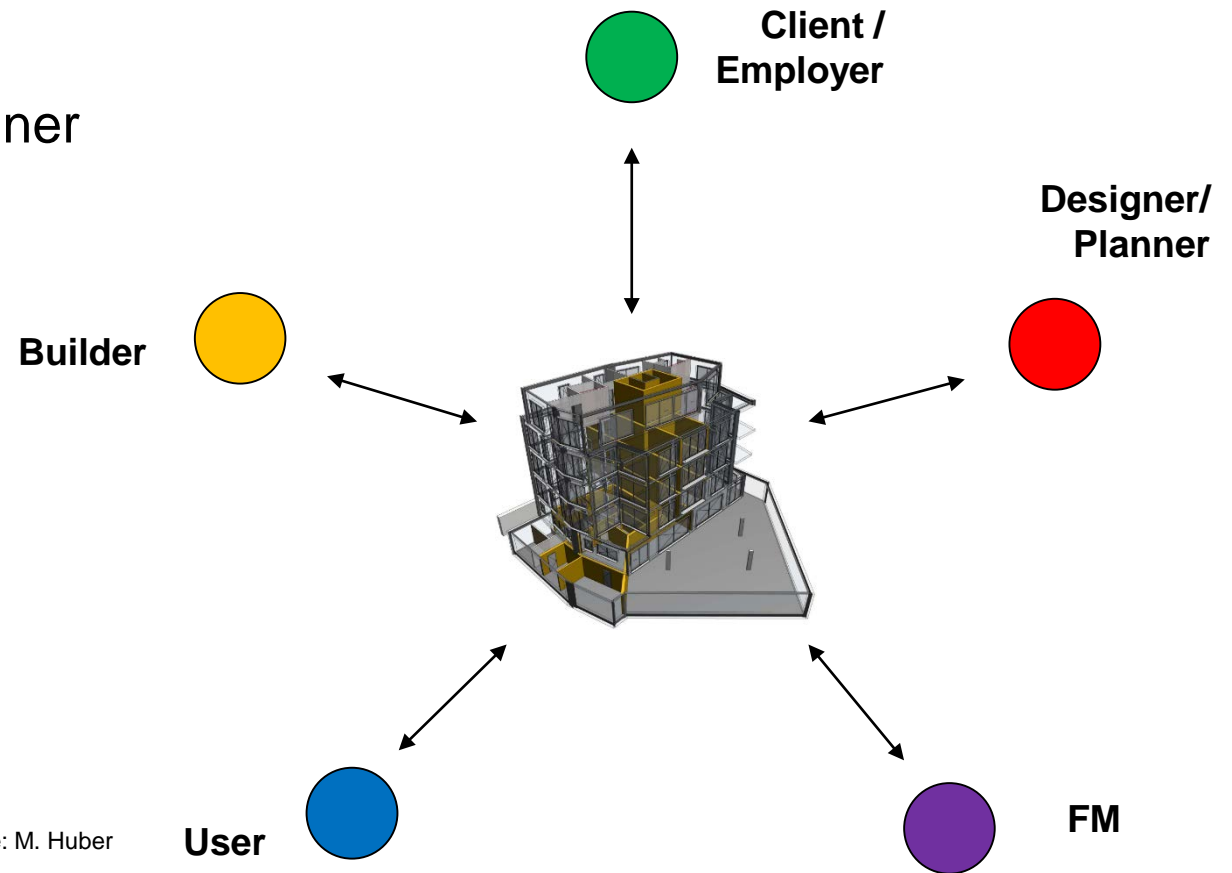

BIM gets together a bunch of stakeholders using a common method

Client – Designer/Planner

Designer/Planner – Designer/Planner

Designer/Planner – Builder

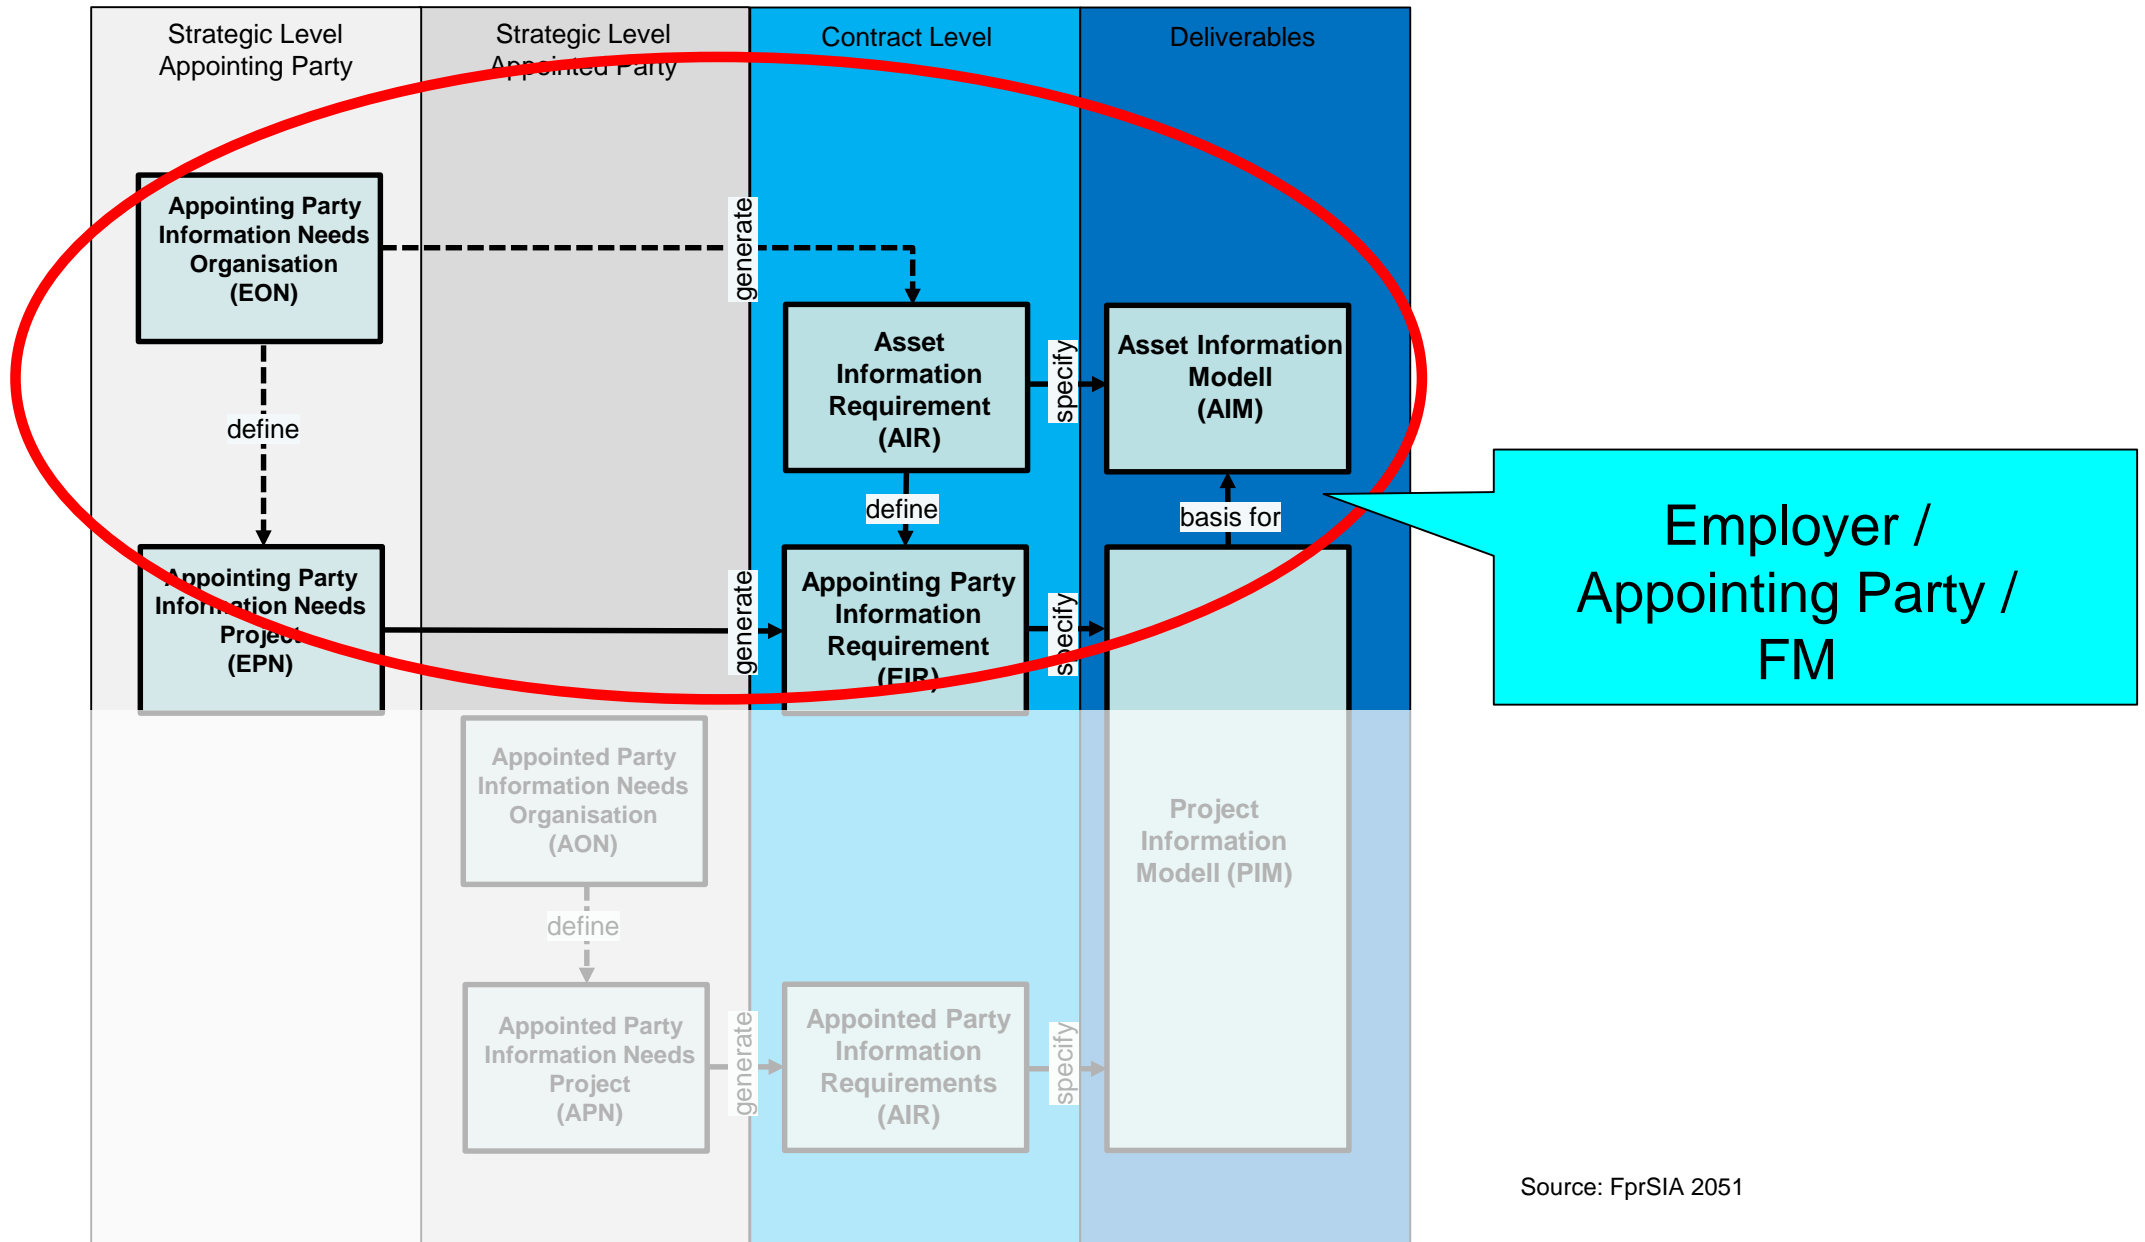

Designer/Planner – User – FM

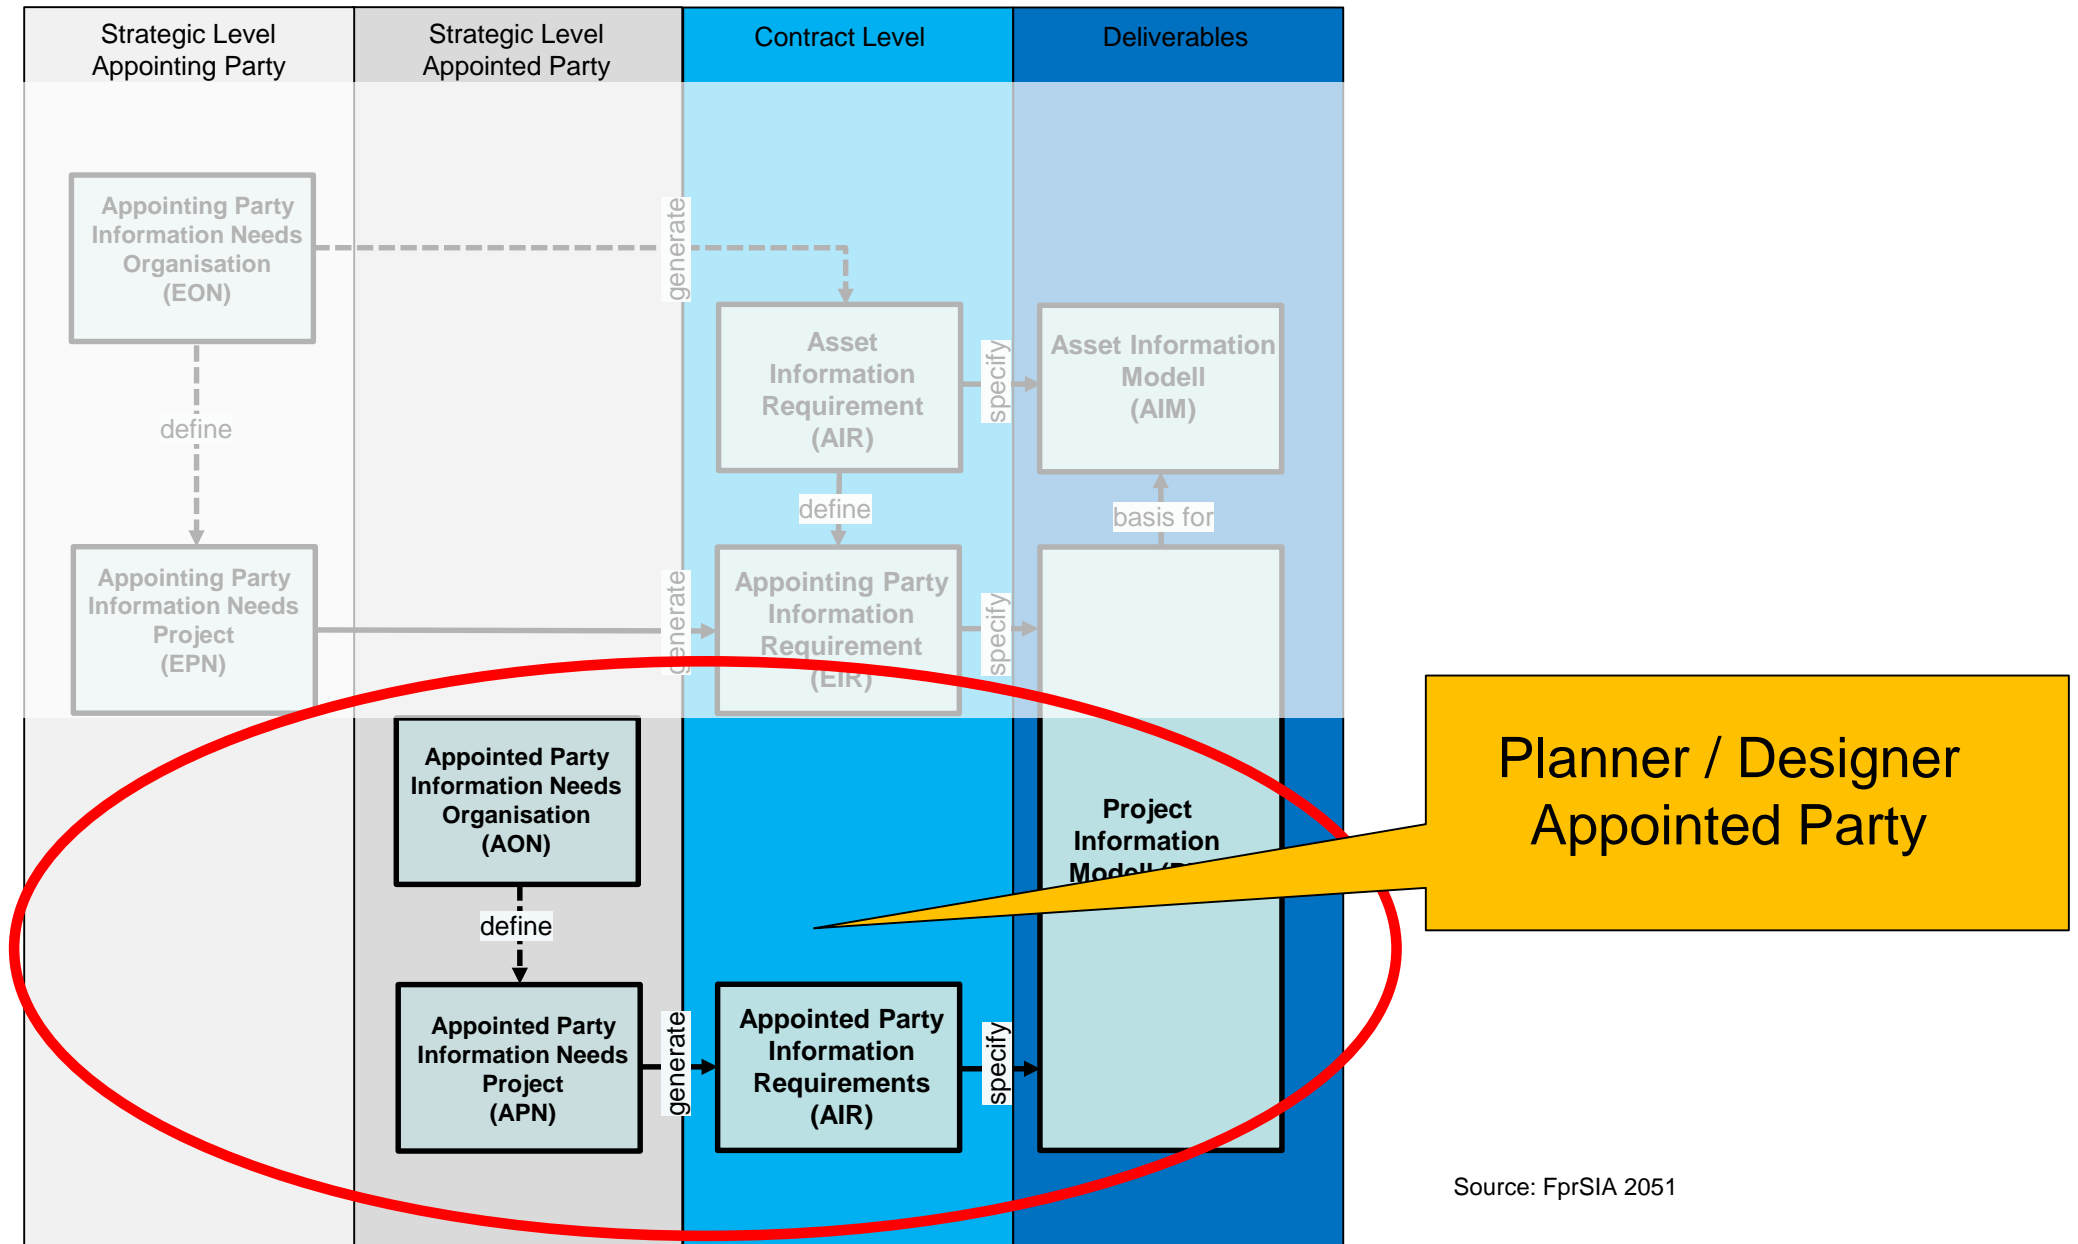

Source: M. Huber

And each of them, has their own needs and requirements

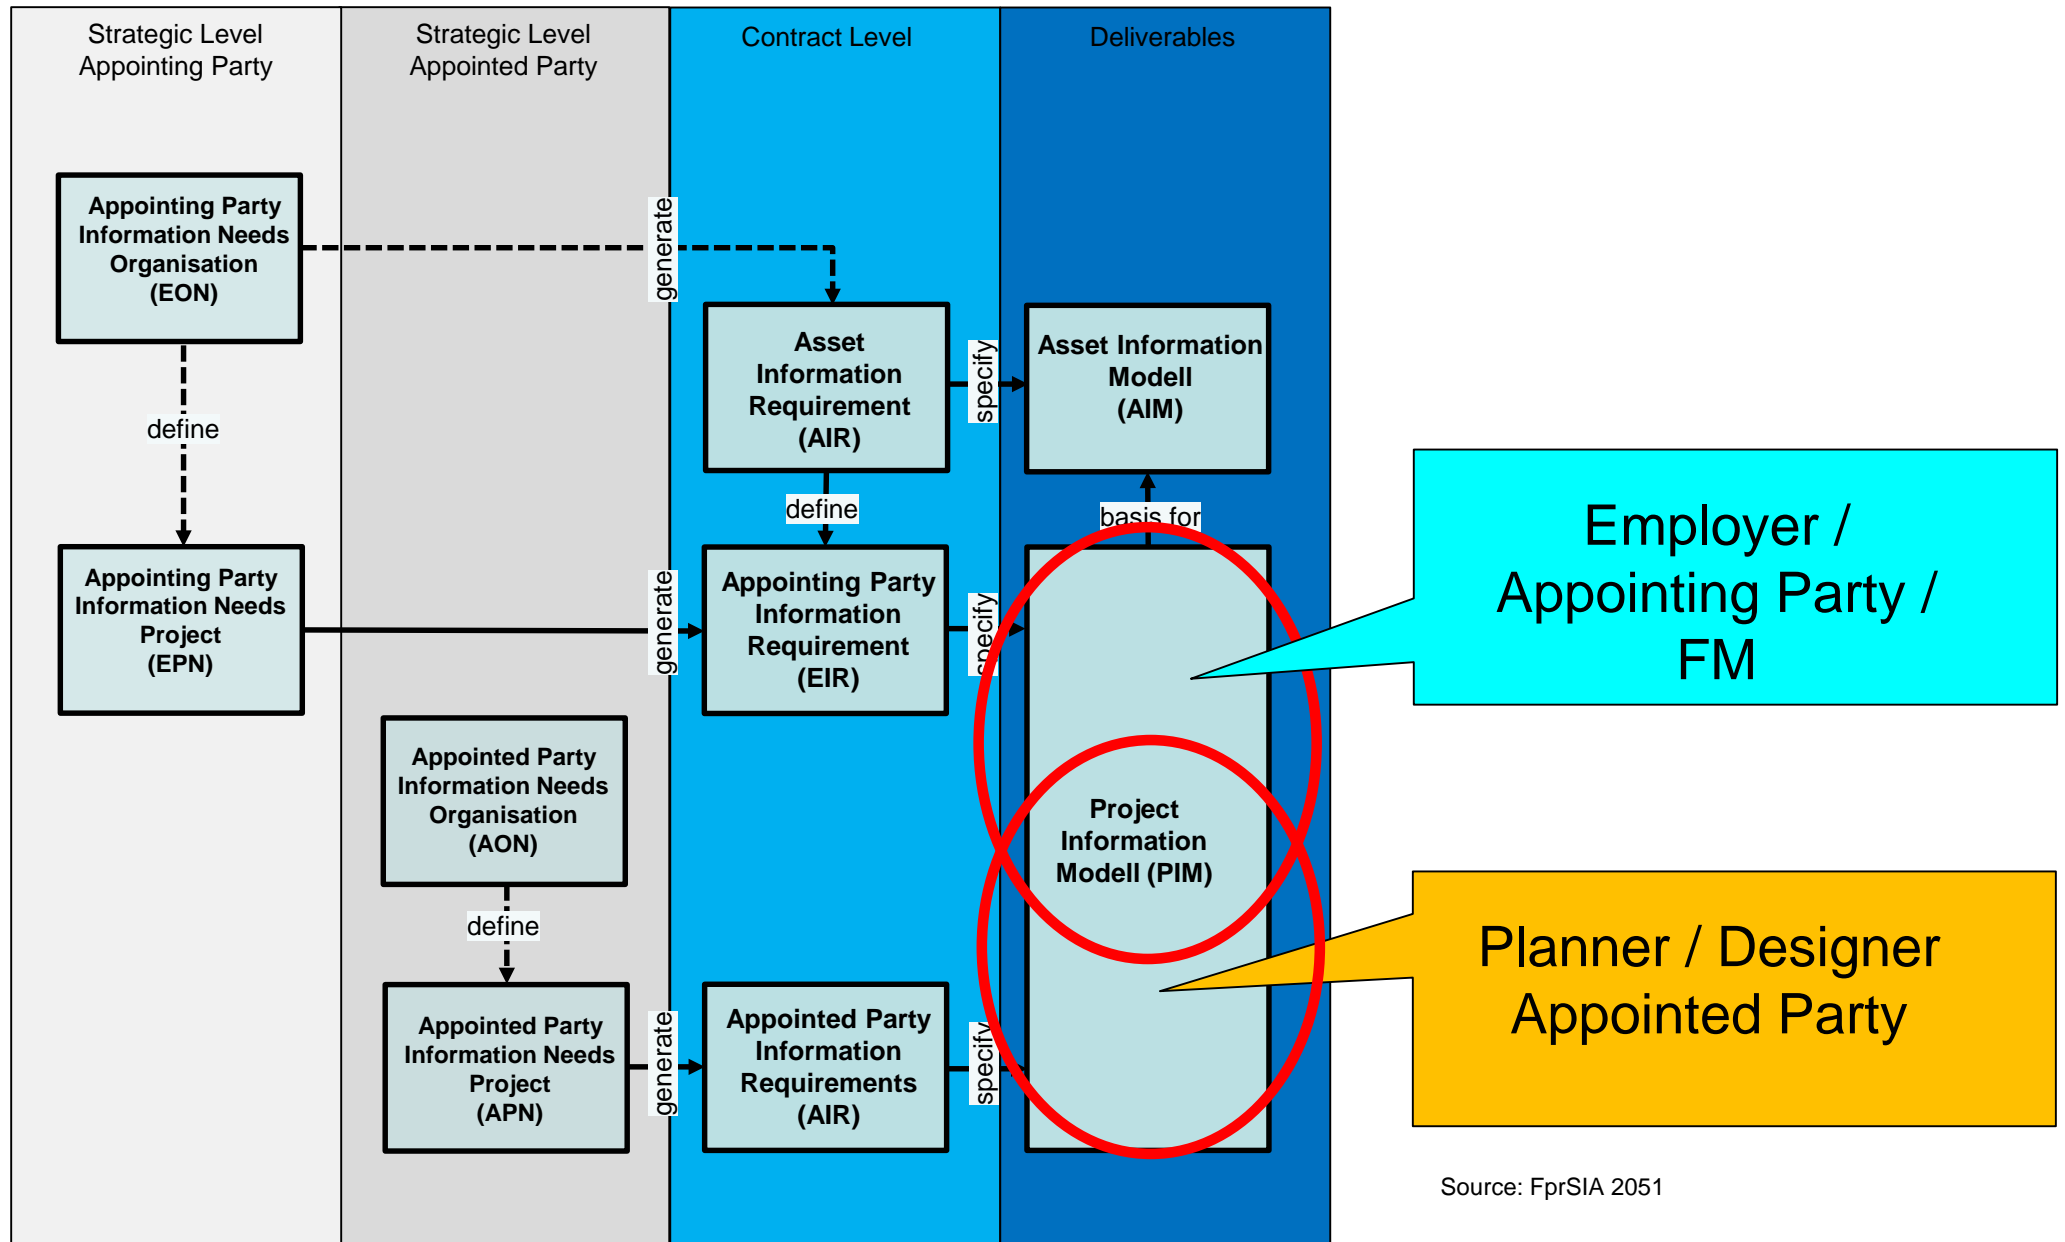

The appointing party side as the appointed party side.

Source: FprSIA 2051

2. Method

To achieve the goals with the BIM Method, it needs more than technology

It needs people who
are using the right
processes.

Source: M.Breit / CIFE

The goal is ...

... at the beginning

Source: pixaby, Claudia Wehrli

.... and the goals should be fixed in a **common** way at the beginning.

Source: pixaby, Henning Westerkamp

Get the goal

And to achieve a goal, it needs **activities** and
«tools/aids» (information).

Source: pixaby, Simon Steinberger

3. Processes

BIM Process: A troika with goals,

Goals

- Requirements
- Metrics

Source: M. Huber

BIM Process: A troika with goals, content

Goals

- Requirements
- Metrics

Content

- Information
- Depth/Width

Source: M. Huber

BIM Process: A troika with goals, content and quality.

Goals

- Requirements
- Metrics

Content

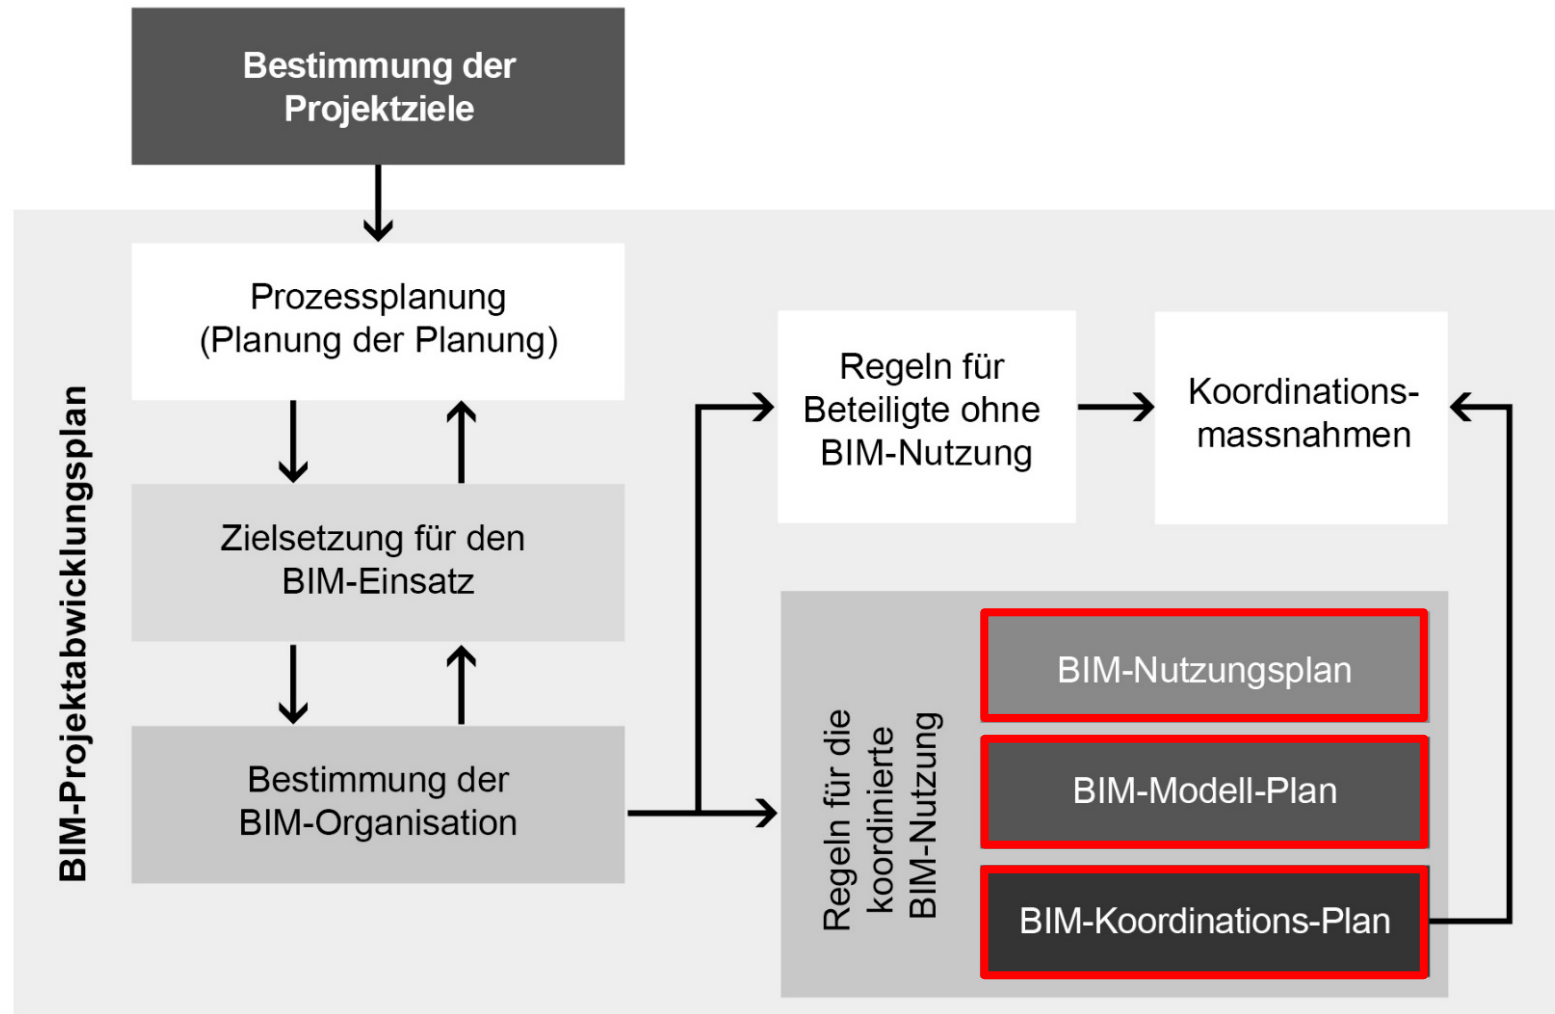

- Information
- Depth/Width

Quality Assurance

- Coordination
- Communication
- Change management
- Session Mode

Source: M. Huber

And each of them is fixed in the BIM Execution Plan

Source: Grundlage prSIA 2051

4. Technology

BIM is not a software

... or a tool.

Source: ban993HAO

BIM is not a software

... or a tool.

But we need digital tools to
execute projects with the BIM
method in an efficiency way.

Source: ban993HAO

e.g. architect

e.g. building skin designer

Source: M. Huber

Exchange model standard

For an efficient exchange of information with digital building models, we need an common open exchange standard.

Digital building models – Data exchange standard

IFC (SN EN ISO 16739: 2016) as independent open exchange standard.

Source: buildingSMART

IFC

Challenges

New Tools: Renaissance

Filippo Brunelleschi: Invention of perspective

Leon Battista Alberti: Ten Books about architecture -> plan

Place of planning ≠ Construction site

- Dome Santa Maria del Fiore (1418-1436)
- Church San Lorenzo (1418-1428)
- Foundling hospital (1421-1455)

Quellen: wikipedia.org

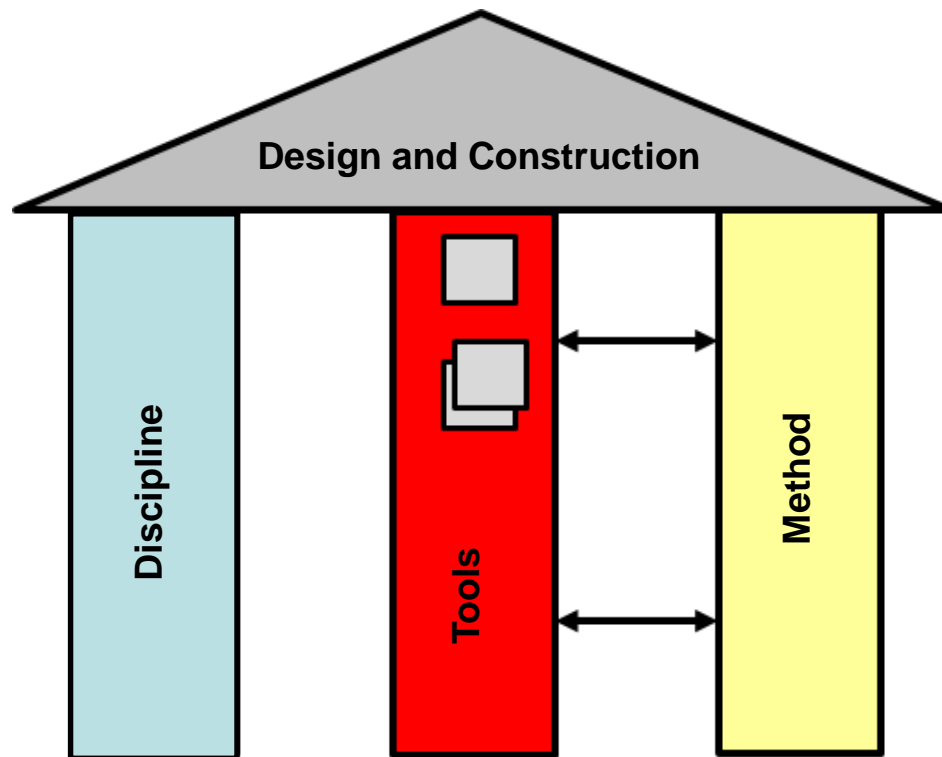

Quellen: Eastman, 1975, S. 49 und 50

Vision: Charles Eastman 1975

“It would combine the **positive aspects of both drawing and models** and eliminate their common weakness. It would incorporate three-dimensional information in an **easy-to-read** format and would require any change to be made only once for its full effect to be revealed. It would accept **changes easily** and provide **automatic checking for spatial conflicts**”

Source: Eastman, 1975, P. 46

Connection: Discipline – Tools – Method

Conclusion

Conclusion

- BIM is not a tool.
- BIM is more than 3D geometry.
- It's the "I", which makes the difference.
- BIM is a method.
- ... an interdisciplinary, collaborative method ...
- ... based on open BIM workflows and ...
- ... using an neutral exchange standard (IFC)
- We are leaving an over 500 years old history behind us. The plans as information carrier are leaving us, an the digital building model as single source of all information becomes reality.
- And it the end: The BIM method is a big opportunity for advanced building skins.

Thanks!
